Blue Star launches new products and solutions with Virus Deactivation Technology (VDT)

Air conditioning and commercial refrigeration major Blue Star Limited announces the launch of a wide range of new products and solutions with Virus Deactivation Technology (VDT).

Virus Deactivation Technology (VDT)

Blue Star's new range of products and solutions with Virus Deactivation Technologies (VDT) has the capability to deactivate viruses including COVID-19 (SARS-CoV-2) with up to 99.9% efficacy, when air passes through these systems.

VDT will be a part of the Company's new range of solutions specially designed for the new reality. Most of the VDT components have also been designed to be easily retrofitted into existing AC systems, both central and unitary, in the field. These VDT solutions will be useful for all air conditioning applications, be it at homes, ATMs, showrooms, restaurants, offices, or large commercial spaces like malls, cinema theatres and airports. It is pertinent to note that the product is not a substitute to the mandatory precautions prescribed by the Government such as wearing masks, social distancing, usage of hand sanitisers and surface hygiene practices.

One of the following components forms the critical part of VDT:

'Livinguard' Filter:

Blue Star offers the 'Livinguard' filter which, through its positive charge, attracts the negatively charged viruses including COVID-19 (SARS-CoV-2) and other microbes, like a powerful magnet, and completely deactivates them when air passes through this filter.

UVC Emitters:

Blue Star has also integrated Ultraviolet Germicidal Irradiation or UVGI technology into its VDT range of solutions. The UVC emitters that are placed in the air conditioning systems irradiate viruses including COVID-19 (SARS-CoV-2) by altering their DNA/RNA. This effectively deactivates the virus present in the air which passes through the air conditioners.

Blue Star's new range of VDT products and solutions

Room ACs with Livinguard filter: The virus is deactivated when the air passes through the filter. The filter is washable and has a long life of at least 3 years*. One of the product variants also assures an air purification level of PM 2.5.

Room ACs with UVGI: The virus is deactivated when the air passing through is exposed to the UV lamp. Retrofitting on existing machines is possible.

Ducted ACs with Livinguard filter: The virus is deactivated when air passes through the filter inside the indoor unit. The filter is washable and has a long life of at least 3 years*. Retrofitting on existing machines is possible.

Ducted ACs with UVGI:

The virus is deactivated when the air passing through is exposed to the UV lamp installed inside the indoor unit. Retrofitting on existing machines is possible.

UVC Tower with Ozone generation: This intelligent, movable and CE certified UV Tower dynamically computes the dosage required to deactivate the viruses and bacteria. It is augmented by an Ozone generator for full disinfection in difficult-to-reach spaces.

Other unique services and solutions offered by Blue Star

Blue Star also offers solutions that help improve indoor air quality, disinfect air and surfaces, and augment fresh air in large conditioned places thereby preventing the spread of viruses including COVID-19 (SARS-CoV-2) virus, in these closed spaces, be it at home, workplace, or commercial spaces like hospitals and malls, amongst others.

Duct cleaning: Blue Star is a certified member of National Air Duct Cleaner's Association (NADCA). The Company's Air System Cleaning Specialists certified by NADCA, render efficient service every single time regardless of the complexity of the project. With the cleaning of the duct, the entire air distribution system eventually gets cleaned.

Hand-held surface disinfectant wand: These solutions decontaminate surfaces infected with mould, bacteria or viruses by using hand-held devices. The wand may be used in any type

of residential, commercial, industrial or institutional building to provide a fast-acting, portable method of decontaminating tabletops, walls and other surfaces.

Portable air and surface disinfectant: This is another way to decontaminate surfaces infested with mould, bacteria or viruses. Mobile units are equipped with multi-patented, high output UVC technology. The entire unit moves on a set of castor wheels and is a portable in-room unit.

Fresh air ventilation solution: Treated Fresh Air Units (TFAs) provide a solution for dilution of the conditioned air with induction of fresh air. The fresh air ventilation system can reduce the intensity of transmission of infection aerosols by dilution of air. TFAs, besides ensuring continuous dilution, will also help in prevention of infiltration or contamination from other zones on account of additional positive pressure built-up in the area.

B Thiagarajan, Managing Director, Blue Star Limited, adds, "Virus Deactivation Technology provides additional protection against viruses including COVID-19 (SARS-CoV-2), in air conditioned spaces. Apart from being completely safe for humans, the above technology deploys components that are non-hazardous, eco-friendly, proven and accepted across the world. The new range of products and solutions, when used while adhering to the safety protocols mandated by the government, will provide additional protection to human beings inside air conditioned spaces."

राज्यात ऑक्सिजनची सर्वाधिक मागणी पुणे जिल्ह्यातच

पुणे, दि.८ (हिंदुस्थान समाचार) : पुणे शहर आणि जिल्ह्यातील कोरोनाचा प्रादुर्भाव एका बाजूला कमी होत असल्याचं दिसत असलं तरी अजूनही राज्यात ऑक्सिजनची सर्वाधिक मागणी जिल्ह्यातच असल्याचं अन्न आणि औषध प्रशासनातर्फे सांगण्यात आलं. कोरोना रुग्णांसाठी असलेली ऑक्सिजनची गरज लक्षात राज्यातील ऑक्सिजनचे उत्पादन प्रतिदिन ९०० टनावरून ११०० टनापर्यंत वाढवण्यात आलं असून एकंदर ऑक्सिजनपैकी ८० टक्के ऑक्सिजन वैद्यकीय

कारणासाठीच वापरला जात असल्याचंही स्पष्ट करण्यात आलं आहे. राज्यात सध्या प्रतिदिन ११७९ टन ऑक्सिजन उत्पादित क्षमता असून त्यापैकी ११०० टन उत्पादन सुरू करण्यात आलं आहे. संपूर्ण राज्यातच कोरोनाच्या रुग्णांमध्ये गेल्या काही दिवसांपासून घट नोंदवण्यात आली असून तुलनेत वैद्यकीय कारणासाठी लागणाऱ्या

ऑक्सिजनची कमी गरज भासत आहे त्यामुळ औद्योगिक वापरासाठी देखील पुरेसा ऑक्सिजन मिळू शकेल असा विश्वास उद्योग मंत्रालयातर्फे व्यक्त करण्यात आला आहे. सध्या कोणत्याही रुग्णालयाला ऑक्सिजनची कमतरता भासत नसल्याचा दावा अन्न आणि औषध प्रशासनातर्फे करण्यात आला आहे.

जिल्ह्यात कोरोनाबाधितांवर लवकरच प्लाइमा थेरपी

रत्नागिरी, दि.८ (हिंदुस्थान समाचार) :

रत्नागिरी जिल्ह्यात कोरोनाबाधितांवर उपचार करण्यासाठी आवश्यक ऑक्सिजनचा पुरवठा करण्याकरिता ७२ लाखचा प्रकल्प लवकरच उभारण्यात येणार आहे, अशी माहिती जिल्ह्याचे प्रभारी पालकमंत्री उदय सामंत यांनी दिली.

श्री. सामंत स्वतः कोरोनाबाधित होते. त्यांच्यावर

मुंबईत उपचार सुरू होते.

कोरोनामुक्त झाल्यानंतर प्रथमच रत्नागिरी जिल्ह्यात आल्यानंतर

त्यांनी जिल्ह्यातील करोना परिस्थितीचा आढावा घेतला. त्यानंतर ते म्हणाले की, रत्नागिरी जिल्ह्यातील रुग्णालयांमध्ये कोरोनाबाधितांवर प्लाइमा उपचार पद्धती येत्या आठ दिवसांत सुरू होणार आहे. जिल्ह्यात सध्या कोरोनाबाधितांच्या रास्तीत जास्त ५०० स्वॅब नमुन्यांची तपासणी प्रयोगशाळेत केली जात आहे.
